

# **!REBEL.BUILD**

## **INMESA OPEN INNOVATION CHALLENGES OPEN CALL RULES**

!REBEL.BUILD is an initiative promoted by INMESA, to bring out innovative initiatives aimed at improving mobility in cities (sustainable mobility) and, ultimately, contributing to the creation of sustainable cities from an economic, social and environmental point of view .

In this context of the Smart City, at INMESA we see SUSTAINABLE MOBILITY as an area with many changes, a variety of actors, different needs, an area where solutions and responses are needed. Barcelona is an ideal context due to the fact that it has an important innovative and technological ecosystem, a city with a high population density, a complex and well-connected urban fabric, and it already has many initiatives to improve urban mobility.

### **The call is open to ideas, product prototypes, technological solutions, or initiatives to improve urban mobility.**

INMESA, as detailed in the Prize section, will provide the material and human resources, in collaboration with the winning person or team, to shape and improve the winning initiative from an engineering and industrialization perspective, helping, with our experience as a company industry, to complete the winning idea.

We encourage you to apply to this call, in which we will collect the proposed solutions, and we will work on them to know them in more detail and define their applicability. The winning solution will obtain our work commitment in the first phase of the industrialization process. We want to be your partners and companions in the process of innovating and bringing solutions to the market! You dare?

The complete Rules are available at  
[www.bcnmobility.com/rebelbuild-bases](http://www.bcnmobility.com/rebelbuild-bases)

Each Participant can submit one or more proposals through the participation form available at the web address  
[www.bcnmobility.com/participa-en](http://www.bcnmobility.com/participa-en)

The prize will be awarded to the proposal that, in the opinion of the jury, demonstrates solutions that best meet the following specific award criteria: Originality and creativity, Social impact, Economic impact, Community commitment, Technical documentation provided.

Presentation of applications: from 14.3.2022 to 23.4.2022.
